

# Analyzing WeRateDogs Twitter Account

## Introduction

This report is to provide some insights and displays some visualizations that I gathered by analyzing the WeRateDogs Twitter Account. Here I will list three insights with their visualizations.

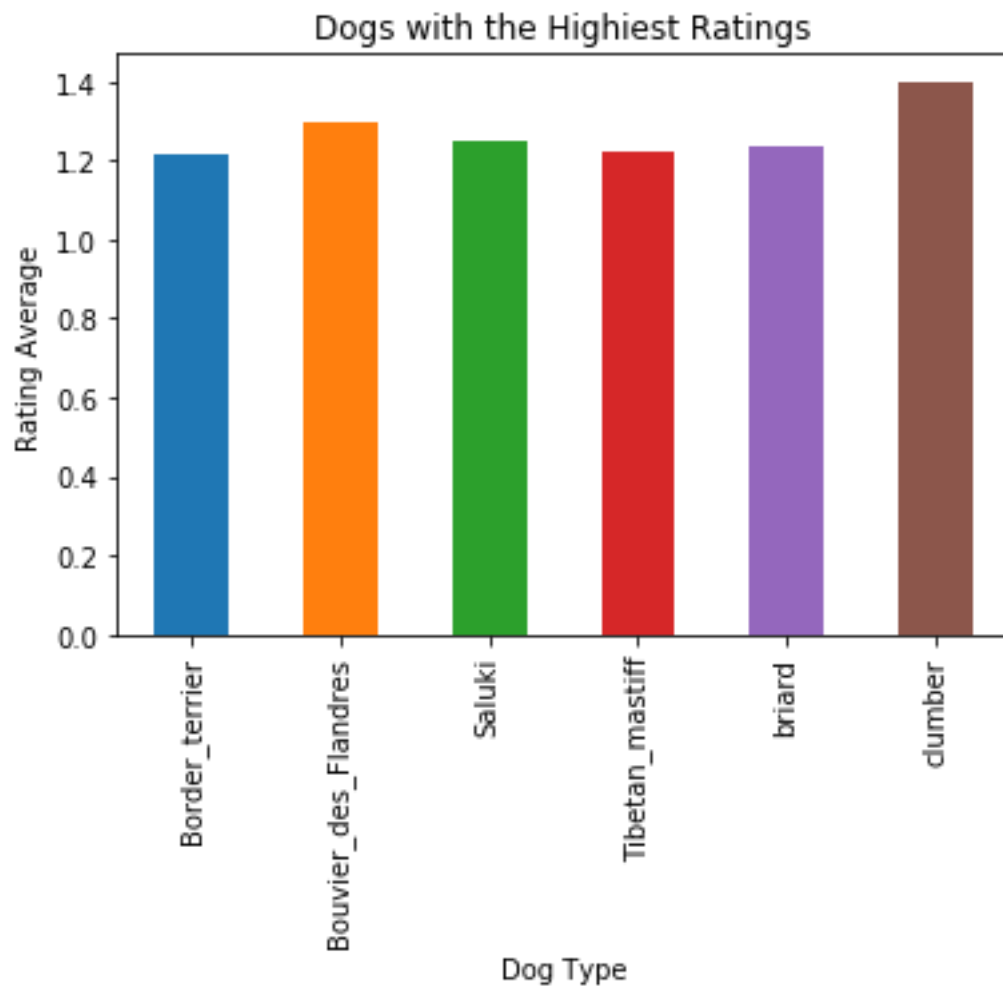

## The rating, retweet and favorite

Here I found out that large number of retweets doesn't mean that dogs have high rating while we can see ratings value affected the retweets and favorite on a different way. where extreme ratings have more retweets and favorite regardless if it is high or low. On the other hand, retweets and favorites have the same change rate.

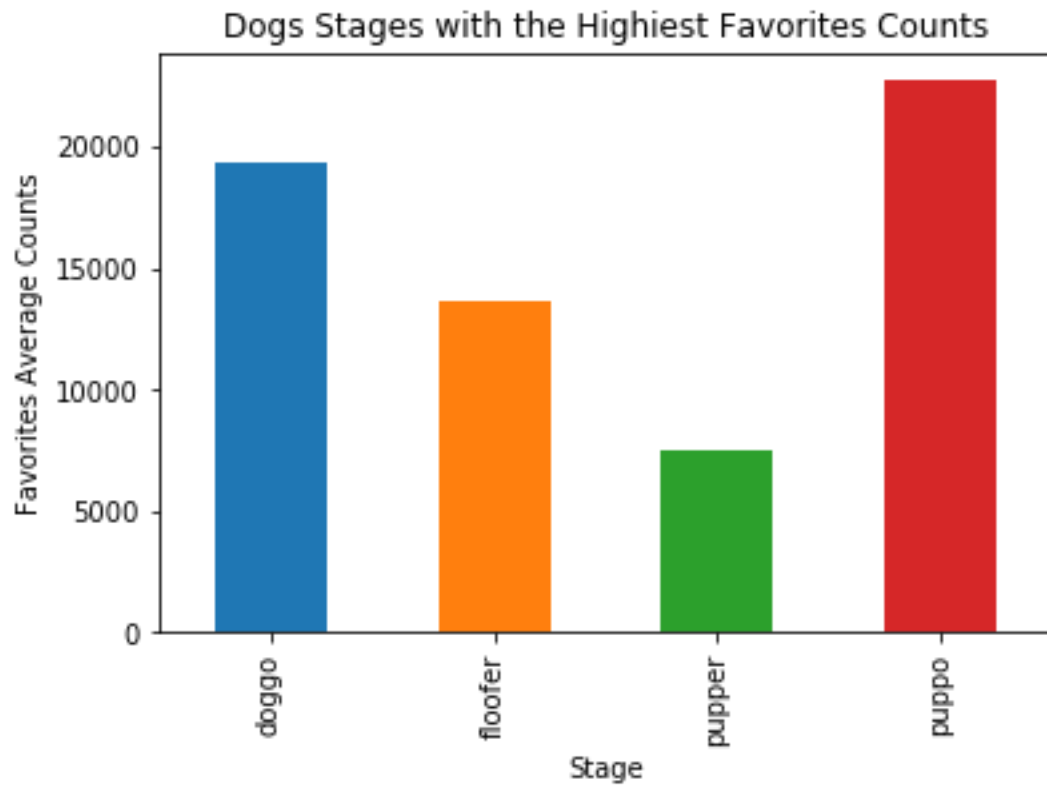

### Type of dogs that have the highest rating

In the data I gathered There are 113 dog type. Each has average rating ranged from 0 to 1.4 where 1.4 is the highest. I picked the ratings above 1.2 which resulted to: the top-rated dogs are: Border terrier, Bouvier des Flandres, Saluki, Tibetan mastiff, briard, clumber, with clumber being the highest rating.

### Dog stages that have the most favorites

Here I have used four stages of the dogs as per to the Dogtionary. The four stages are: Doggo, Floofer, Pupper, Puppo. People seems to like the dogs at the Puppo stage the most, while they like Pupper stage the least.

### Conclusion

In conclusion, we can say that when we evaluate a dog type or a dog stage on how people like it. It is better to use the likes "Favorites" instead of the rating which is an indicator that's not every rating matches what people likes the most.
